

RELEASE RESCUE

48-Hour QA Audit

Find the release risks your team is too close to see - before customers find them.

01 Critical flows tested

02 Bugs ranked by risk

03 Automation you keep

What you receive

- **Priority user-flow audit**
Hands-on testing of the flows that create revenue, activation or support load.
- **Actionable defect report**
Reproduction steps, expected vs actual result, severity and evidence.
- **API smoke checks**
Fast validation of critical endpoints where access and scope allow.
- **3-5 Playwright tests**
Reusable browser tests for the most valuable regression paths.
- **Release-risk summary**
A plain-English decision brief: ship, fix first or investigate further.

How it works

- 1 Scope**
You identify the product and 1-3 critical journeys.
- 2 Audit**
I test, document and automate the highest-value checks.
- 3 Delivery**
You receive the report, tests and a clear release recommendation.

Best fit

Small SaaS teams, product studios and web agencies preparing a release, inheriting an untested product or needing independent QA capacity without a long consulting engagement.
